

Liuguanghe Xiqian Expressway Bridge (14)

INTRODUCTION

The Liuguanghe Xiqian Expressway Bridge is a 375 metres high [cable-stay bridge](#) crossing the [Yachi River](#) between [Xiuwen](#), [Guiyang](#), and [Qianxi, Bijie](#) in [Guizhou](#), [China](#).

The Liuguanghe Bridge will carry traffic on the Xifeng to Qianxi Expressway. The bridge will have a main span of 580 metres and a total length of 1280 metres. The highest tower is 245 metres high also making it one of the [tallest bridges in the world](#). Although the bridge is officially 375 metres high, that measurement is taken from the original river level. Construction of the [Wujiangdu Dam](#) down stream from the bridge has created a reservoir that extends under the bridge reducing the viable height above the water to 300 metres.
