

# Bridge near Limyra

The Bridge near Limyra is a relatively unknown, yet unique stone bridge – it is believed to be one of the oldest segmented arch bridges in the world. The bridge is located near the ancient city of Limyra and is the largest civil engineering structure of antiquity in the region. The way the arches of the bridge were built gives the bridge an unusually flat profile, which was unique in Roman engineering at the time. Due to this fact and the lack of comparable structures, it has been hard to date the construction of the bridge, which is estimated to be sometime in the 3rd century. Additionally, very little scientific research has been conducted on the bridge and there is no information about the bridge from ancient sources.
